Professional Summary

- Software Engineer with 3 years of experience building Java, Spring Boot and React applications using microservices, Kafka, Elasticsearch and MySQL for enterprise logistics platforms.
- Proven track record of driving end-to-end feature ownership, collaborating across product and engineering teams and delivering reliable production systems in Agile environments.
- Passionate about building maintainable platforms, simplifying complex systems and delivering reliable software through clean architecture, automation and engineering best practices.

Technical Skills

Backend: Java, Spring Boot, Spring Security, Spring Data JPA, REST APIs, Microservices

Frontend: React, Redux

Messaging: Kafka

Databases: MySQL, MongoDB, Elasticsearch, Redis

Testing: JUnit 5, Mockito, Jest, Playwright

Tools: Docker, Git, Gradle, Postman, Kibana, GCP

Work Experience

WiseTech Global (formerly Blume Global)

Aug 2023 – May 2026

Team: Search & Orchestration Platform

Function: Enterprise logistics platform responsible for shipment orchestration, business rules management, Elasticsearch-powered search and data synchronization, **processing over 1 million shipment events daily**.

Software Engineer

Apr 2025 – May 2026

- Redesigned the enterprise search platform by migrating to the native Elasticsearch Java client with Point-in-Time pagination, reducing search latency by **30–40%** and improving deep-pagination performance by **50%**.
- Rebuilt the MySQL–Elasticsearch synchronization pipeline using parallel batch processing and optimized JPA access, delivering **10–15× higher throughput** while reducing database queries by **50–70%**.
- Architected a reusable query framework that standardized complex filtering across enterprise search services, improving maintainability and accelerating feature delivery.
- Modularized Spring Boot search services and introduced diagnostic APIs, reducing production debugging effort and simplifying platform enhancements.
- Engineered an AOP-based profiling framework and operational tooling that improved production observability and accelerated migration performance analysis.
- Led resolution of **10+** critical production incidents across Kafka, authentication and distributed services, improving platform reliability and customer experience.

Associate Software Engineer

Aug 2023 – Mar 2025

- Designed and delivered end-to-end Spring Boot APIs and React features including Activity Log, Transit Stops, Shipment Alerts and Rail Billing across **7 enterprise logistics applications**, collaborating with product and UX teams to deliver customer-facing functionality.
- Implemented charge-processing workflows, shipment alerting and ASN 856 EDI enhancements using Spring Boot, REST APIs and Kafka, improving workflow automation and billing accuracy.
- Increased automated test coverage to **58%** using JUnit, Mockito and UI automation, improving release confidence and CI reliability.

Projects

RestaurantOS [Restaurant Management Platform]

Stack: Java, Spring Boot, Spring Security, React, MySQL, MongoDB, Elasticsearch, Docker

- Built a modular restaurant management platform supporting secure authentication, role-based authorization, tenant isolation and end-to-end order lifecycle management.
- Integrated MySQL, MongoDB and Elasticsearch to separate transactional and search workloads and containerized the application using Docker Compose for reproducible multi-service development.

Education

College of Engineering Guindy, Anna University [B.E. Manufacturing Engineering]

2019 – 2023
