## Professional Summary

---

- Software Engineer with 3 years of experience building distributed, event-driven microservices using Java, Spring Boot, Kafka, Elasticsearch and MySQL.
- Experienced in workflow orchestration, business rules management, asynchronous event processing, distributed transactions and Elasticsearch-powered search platforms.
- Recognized for end-to-end ownership, cross-functional collaboration and rapid delivery of scalable solutions.

## Technical Skills

---

**Languages:** Java, JavaScript, Python, SQL

**Backend:** Spring Boot, Spring Data JPA, Spring Security, REST APIs, Microservices

**Distributed Systems:** Kafka, Saga Pattern, Event-Driven Architecture, Asynchronous Processing, Redis

**Data & Search:** MySQL, MongoDB, Elasticsearch

**Frontend:** React, Redux

**Testing:** JUnit 5, Mockito, Jest, Playwright

**DevOps & Tools:** Docker, Git, Kibana, Postman, GCP, GitHub Copilot, Claude Code

## Work Experience

---

### WiseTech Global (formerly Blume Global)

Aug 2023 – May 2026

**Team:** Search & Orchestration Platform

**Function:** Enterprise logistics platform responsible for shipment orchestration, business rules management, Elasticsearch-powered search and data synchronization, **processing over 1 million shipment events daily.**

### Software Engineer

Apr 2025 – May 2026

- Migrated Elasticsearch integration to the native Java client with Point-in-Time pagination, reducing search latency by **30-40%** and improving deep-pagination performance by **50%**.
- Re-architected the MySQL-Elasticsearch synchronization pipeline with parallel batch processing and optimized JPA fetching, delivering **10-15× higher throughput** and **50-70% fewer database queries**.
- Designed a reusable Elasticsearch DSL query framework supporting nested, range and boolean filters, validated with **68+ automated test scenarios**.
- Modularized the search service and introduced diagnostic APIs, improving query debugging and accelerating production issue resolution.
- Built operational tooling including diagnostic APIs and an AOP-based batch profiler, improving production observability and migration troubleshooting.
- Resolved **10+ critical production incidents** across Kafka, authentication, shipment processing and Elasticsearch synchronization.

### Associate Software Engineer

Aug 2023 – Mar 2025

- Delivered charge-processing workflows with server-side defaulting and enrichment across REST and Kafka, improving billing accuracy.
- Built shipment alerts, permission-based alert configuration and ASN 856 EDI enhancements for a multi-tenant logistics platform.
- Developed Spring Boot microservices and React modules for Activity Log, Shipment Alerts, Transit Stops and Rail Billing across **7 enterprise logistics applications**.
- Increased automated test coverage to **58%** using JUnit, Mockito and UI automation, improving CI stability and release confidence.

## Projects

---

### RestaurantOS [ Restaurant Management Platform ]

**Stack:** Java, Spring Boot, Spring Security, MySQL, MongoDB, Elasticsearch, Microservices, Docker

- Designed a modular-monolith restaurant platform with JWT-secured APIs, per-role signing keys, order lifecycle management, multi-tenant data scoping and Elasticsearch integration, containerized with Docker Compose across MongoDB and MySQL datastores.

## Education

---

College of Engineering Guindy, Anna University [ B.E. Manufacturing Engineering ]

2019 – 2023
